

TRANSPORTATION ELEMENT

EXECUTIVE SUMMARY

In 1977, SWWRPC staff and representatives from its five member counties conducted a thorough analysis of the region's transportation system. The report's goal was to: serve as a resource for the residents of southwest Wisconsin to use in analyzing transportation proposals; inform readers of the many varied and complex interrelationships evident in any transportation system; help determine where the emphasis should be placed in planning activities; and to provide a more comprehensive outlook when dealing with transportation problems.

In the intervening years, other transportation plans and reports have also looked at Iowa County and the region, resulting in many improvements to the transportation system.

This document is structured to provide historic context (see Map C.1 for early transportation routes in southwest Wisconsin) and to provide information on local issues within the transportation framework. Although many issues are presented in a regional context, the assertion made in the SWWRPC 1972 *Technical Report No. 4: Prospective for Regional Transportation Planning* holds true today: "It should be emphasized, however, that regional planning is not a substitute for local planning. On the contrary, regional planning is intended to strengthen local planning efforts by providing a more comprehensive base of information in a regional context in order to facilitate rational private and public decisions on the local level."

The advantage of using a regional context to inform local transportation planning is that the relationship to scale is reinforced. From this perspective, the Transportation Element provides historic and regional context, considers local transportation needs, and based on local input provides a 20-year jurisdictional plan that can serve as a resource guide and implementation tool.

Wisconsin State Statute 66.1001(2)(c)

(c) Transportation element.

A compilation of objectives, policies, goals, maps and programs to guide the future development of the various modes of transportation, including highways, transit, transportation systems for persons with disabilities, bicycles, electric personal assistive mobility devices, walking, railroads, air transportation, trucking and water transportation. The element shall compare the local governmental unit's objectives, policies, goals, and programs to state and regional transportation plans. The element shall also identify highways within the local governmental unit by function and incorporate state, regional and other applicable transportation plans, including transportation corridor plans, county highway functional and jurisdictional studies, urban area and rural area transportation plans, airport master plans and rail plans that apply in the local governmental unit.

Beginning on January 1, 2010, any program or action of a local governmental unit that affects land use shall be consistent with that local governmental unit's comprehensive plan, including ...
 (m) An improvement of a transportation facility that is undertaken under s. 84.185.

TRANSPORTATION POLICIES

The Village of Ridgeway's identified transportation policies are listed below.

➤ **Transit**

- Support the development and promotion of increased paratransit services for local residents.
NEXT STEPS: The Village of Ridgeway may want to work with the Iowa County Commission on Aging to learn more about services, promote existing services, and to possibly support expanded services.
- Explore intergovernmental interest in the creation of a Park-and-Ride facility.
- Explore intergovernmental interest in the creation or expansion of countywide or regional vanpool or bus services

➤ **Land Use**

Given its proximity to USH 18/151, the Village of Ridgeway should carefully coordinate its housing and business development planning with WISDOT.

➤ **Street Maintenance**

Seek outside assistance and funding mechanisms to help subsidize the pressing need for routine street maintenance funds. (Refer to information in this Section under Maintenance and Improvements and the end of this Section for current funding programs available to the village.)

VILLAGE OF RIDGEWAY

In 2003, the Village of Ridgeway's Plan Commission was asked to identify primary issues and concerns.

- Most satisfactory: Access to USH 18/151.
- Least satisfactory: Virtually no public transportation and poor road and sidewalk conditions.
- Desired improvements:
 - Interchange access to USH 18/151
 - Development of public commuter transportation (Madison and Dodgeville)
 - Improvements to Village roads and sidewalks.

The Village of Ridgeway's Plan Commission respondents identified transportation projects or issues that they foresee in their jurisdiction.

- 10 years:
 - Routine repair and maintenance (Jarvis St. and Grove St.)
 - New residential streets
- 20 years (the planning window for the comprehensive planning process):
 - Routine repair and maintenance
 - New residential streets
 - Interchange access to USH 18/151.

NOTE: In 2004, WisDOT launched a study to review future access needs along the USH corridor to ensure that both safety and efficiency of the corridor is preserved. The study was scheduled to run about 18 months.

The next section looks more closely at the locally identified transportation issues. In reviewing the transportation survey responses that had been completed by residents, the Village of Ridgeway's Plan Commission respondents ranked the following transportation issues as having the highest priority for meeting local needs (#1 is the highest priority ranking):

1. **Connectivity with the larger transportation system**
2. **Transportation safety**
3. **Freight mobility**
4. **Tourism (including preservation of rural views)**
5. **Recreational transportation uses**
6. **Transportation needs of the elderly and disabled**
7. **Transportation to support economic development**
8. **Agricultural-vehicle mobility**

These issues thread throughout the Village of Ridgeway’s plan—including its housing, economic development, land use, and implementation elements. Although the scope of this plan is local, it recognizes that local planning is part of the mosaic that should inform WisDOT’s vision and priorities for budgeting and planning. WisDOT also acknowledges the complexity of balancing these issues:

“Wisconsin’s healthy economy has also caused increased commuter and commercial demand on local roads and streets. Much of the state’s 100,000 miles of local roads are facing the same aging infrastructure needs as the state highways. Furthermore, an ever-increasing number of local roads are experiencing congestion problems as communities continue to grow. Because it is essential that state highways and local roads and streets work in unison, the state has to continue to provide funding to local units of governments to help support construction, improvement and maintenance of locally owned highways, roads, streets and bridges. As is the case with the state highway system, it is likely that demands on local roads and streets will continue to grow in the future (WisDOT).”

Like WisDOT, local governments grapple with these issues and constraints as they make decisions related to housing, development, schools, roads, and funding. A report entitled *The Evaluation of Statewide Long-Range Transportation Plans*, examined Wisconsin’s Transportation Plans and concluded:

“Population growth alone is a challenge that is anticipated in many states. Wisconsin anticipates a 13 percent growth over the plan period [through 2020]. This will create additional demand on existing transportation facilities, along with requiring additional services. This need for services will be compounded by the fact that both its elderly and working age populations will be increasing, with their separate transportation needs” (prepared for the FHWA and US DOT, April 2002).”

2000 US Census for the Village of Ridgeway

Table C.1, drawn from transportation-related responses, is included because it provides some insights related to possible future needs.

- The age of residents is important—those under 15 do not drive; those over 62 may, at some point, be users of shared-ride transportation services. Data for Vehicles Available is also included.
- Employment Status and Work-at-Home numbers provide some perspective on commuting patterns, as does information on Commute Time and Time Leaving Home To Go To Work.
- Information on the Age of Housing Stock is included because housing construction yields increased trip generation and its impacts should be considered.

What future needs are indicated? How do they overlap? It can be difficult to answer these questions and it is more difficult without public input and participation. For WisDOT, this is not simply a goal—it’s an obligation. As required by federal law, *“Environmental Justice”* requires public involvement efforts to reach out to minority and low-income populations. Why? Because historically the interests of these groups have been ignored in transportation decision-making.

In Iowa County a four-person household is considered to be *low-income* if it has a total annual income of \$18,100 or less/year. According to the 2000 U.S. Census, 7.3 percent of Iowa County’s residents are in this income category and WisDOT is required to make every effort to ensure that their input helps to inform transportation planning decisions.

Table C.1 – 2000 US Census Data

Population	T Ridgeway 590	V Ridgeway 694	Iowa Co. 22,780	Wisconsin 5,363,675
Age				
Percentage of the population under 15 years	23.7%	22.4%	22.0%	21.0%
Percentage of the population age 62 or older	12.4%	12.1%	15.5%	15.4%
Median age (in years)	38.0	34.4	37.1	36.1
EMPLOYMENT STATUS				
Employed percentage in the workforce (age 16 & older)	72.7%	73.9%	72.5%	65.8%
Unemployed percentage in the workforce	4.5%	3.4%	3.0%	3.2%

Table C.1 (cont.) – 2000 US Census Data

Population	T Ridgeway	V Ridgeway	Iowa Co.	Wisconsin
WORK CARPOOLING				
Percentage residents in the labor force working at home:	16.4%	3.4%	8.4%	3.9%
Percentage who drove to work alone	71.1%	77.6%	74.6%	79.5%
Percentage who carpooled	10.4%	16.5%	12.6%	9.9%
2-person carpool	9.1%	10.1%	9.5%	8.1%
3-person carpool	0.6%	4.6%	1.8%	1.2%
4-person carpool	0.0%	0.8%	0.6%	0.4%
5- or 6-person carpool	0.0%	0.0%	0.2%	0.2%
7-or-more-person carpool	0.6%	1.0%	0.4%	0.1%
Public transportation	0.9%	0.5%	0.2%	2.0%
Motorcycle	0.0%	0.0%	0.0%	0.1%
Bicycle	0.0%	0.0%	0.2%	0.4%

Median reported 1999 household income (in dollars)	\$50,938	\$41,548	\$42,518	\$43,791

LOCAL TRANSPORTATION INFRASTRUCTURE & ISSUES

Survey Responses

The initial comprehensive planning survey yielded these responses from the residents of the Village of Ridgeway:

- Ninety percent agreed or strongly agreed that Iowa County's overall road network (roads, streets, and highways) meets the needs of its citizens.
- Seventy-eight percent agreed or strongly agreed that local roads and streets conditions in the Village of Ridgeway are adequate for intended uses.

Transportation Modes

Plan Commission respondents were asked to identify the transportation modes that currently use public infrastructure within the Village of Ridgeway (in addition to personal cars, trucks, and motorcycles). They are identified below with an **X**.

MODE		Used	Not Used
Travel	Carpooling	X	
	Para-transit (shared-ride, taxi)	X	
Agriculture	Tractors	X	
	ATVs (all terrain vehicles)	X	
Recreation	Bicycles	X	
	ATVs	X	
	Other		X
Freight	Trucking	X	
	Rail		X
	Air		X

Existing Streets

The Village of Ridgeway has 6.47 miles of streets, comprised of,

- 1.87 miles of County Trunk Highways
- 4.60 miles of Local Streets

The Village of Ridgeway is adjacent to the USH 18/151 corridor, with CTH H as the primary access point. See Maps C.2, C.3, and C.4 and Tables C.2a and C.2b at the end of this Section for more information.

LOCAL ECONOMIC DEVELOPMENT

Transportation is a factor in location decisions of commercial and industrial development. In locations where the development is included in local plans, communities should also assess their transportation infrastructure and determine what future improvements may be needed. Communication, during this planning process and when unforeseen development opportunities arise, should include WisDOT, adjacent governmental units, as well as interested parties and other stakeholders. The value of local plans is that they inform county, regional, and state plans and this coordination can help to identify the transportation facilities needed by future development.

NOTE: WisDOT started an access study of the Iowa County portion of USH 151 during the 3rd Quarter of 2004. The long-term goal was to remove at-grade intersections wherever possible to preserve the safety and efficiency of the corridor. The Village of Ridgeway should work with WisDOT District 1 to ensure that its long-range land use plans are compatible.

The Village of Ridgeway's Plan Commission respondents were asked whether their existing local transportation system does a good job of meeting the needs of the jurisdiction's economic development goals related to:

- Agriculture Does Not Apply
- Retail/Commerce Yes
- Shipping Does Not Apply
- Manufacturing Does Not Apply
- Tourism Yes

ENVIRONMENT

Transportation and construction projects can impact the natural environment around a project area. When making short- and long-term transportation decisions, it is important to adequately address environmental implications on air quality and energy consumption; agricultural lands; and wetlands and wildlife. To minimize these effects, efforts to preserve the environment of a project area can include:

- Wetland mitigation (preservation, creation, enhancement and restoration)
- Prairie restoration
- Archeological work
- Hazardous waste management
- De-icing procedures and salt reduction
- Storm water management
- Noise monitoring and noise walls
- Nesting boxes
- Erosion control

One aspect of this is to manage stormwater run-off from transportation facilities. Additionally, transportation improvements and community development decisions should be coordinated and the impacts that each has on the other should be considered. For more information on this topic, see Appendix C-1 and Section E, Agricultural, Natural, and Cultural Resources Element.

TRANSIT, ACCESSIBILITY, and SPECIAL NEEDS USERS

Transit, accessibility, and special needs users have limited options in Iowa County. The state operates a vanpool program, administered by the Wisconsin Department of Administration, which currently operates seven vans that stop in Iowa County. The closest pick-up point would be Dodgeville or Mount Horeb. According to the 2000 US Census, 16.5 percent of Village of Ridgeway residents carpool to work (77.6 percent drove alone and 3.4 percent worked at home). As the Plan Commission respondents noted, the community may wish to explore the creation and support of an informal Park-and-Ride.

Plan Commission respondents expressed interest in bus service at a county or regional scale. Currently Greyhound bus service travels on the USH 14 corridor through the northern part of Iowa County; there are no stops in Iowa County and none in proximity to the Village of Ridgeway.

Although limited, transportation for the elderly and disabled is provided by the Iowa County Commission on Aging. WisDOT's report *Transportation in Wisconsin: a Vision for the 21st Century* projects that by 2020 the number of state residents over the age of 65 will increase by more than 50 percent. Wisconsin has funded a share of local transit operating costs since 1974. Today, state aid is the largest source of funding for Wisconsin's 69 public transit systems—covering more than 40 percent of eligible operating costs. These transit operating aids topped \$251 million in the 2003-05 biennium. According to WisDOT, Wisconsin is ranked 7th nationally in the level of state support for transit operating costs. However, the state's aging rural population will be likely to require more transportation options. Plan Commission respondents expressed concern that the services that are available are too limited, noting that there is "very little for the elderly and virtually nothing for kids." See Map C.5 for more information.

1) Support the development and promotion of increased paratransit services for local residents.

NEXT STEPS: The Village of Ridgeway may want to work with the Iowa County Commission on Aging to learn more about services, promote existing services, and to possibly support expanded services.

2) Explore intergovernmental interest in creation of a Park-and-Ride facility.

3) Explore intergovernmental interest in the creation or expansion of county-wide or regional vanpool or bus services.

For bicycle information, see Maps C.6 and C.7 at the end of this Section.

LAND USE

The land use and transportation relationship is cyclical, beginning when population and economic growth create demand for land development. New development results in more vehicle trips and places greater demand on surrounding streets, roads, and highways. This is a complex interrelationship. As a WisDOT report acknowledges,

“WisDOT influences land development mostly through the provision of infrastructure. Some transportation-related regulations also may have an effect. For state transportation, the effects on surrounding land uses are often more unintentional than intentional ... the most significant role that transportation plays in land development is affecting access to land.”

Some land use trend indicators include:

- Past and projected population growth
- Employment trends by sector
- Residential housing permits housing prices over the last 5-10 years
- Population densities changes: persons/acre; households/acre; commercial persons/acre use (indicating rate of land consumption)
- Conversion of age-land to non-age-land uses and comparison with the land sale prices land remaining in age (indicating stability of age-uses)
- Participation in Farmland Preservation Program (indicating stability of age-uses)
- Septic system permits (indicating development in unsewered areas)
- Changes (or requests) to expand sewer service areas (indicating expansion of urban service areas)
- Commuting patterns (indicating the relationship between employment and residential land uses)

(From Land Use in Environmental Documents: Indirect and Cumulative Effects Analysis for Project-Induced Land Development. WisDOT, 1993)

Local government plans, in conjunction with a zoning ordinance, attempt to direct residential, commercial, industrial, and agricultural uses to the most appropriate part of the community. When coordination is lacking or inadequate, the outcome can cause congestion and increase the chance for crashes. Retrofitting transportation facilities for enhanced mobility and safety is difficult for local governments and WisDOT. For more information, see Appendix C-3.

Realistically, given the cyclical nature of the transportation-land use relationship, when transportation improvements alleviate congestion, the newly developed land may become even more accessible, resulting in higher land values and greater pressure to develop adjacent, undeveloped land. The cycle begins again with more intensive levels of development and greater transportation demands. These pressures are being felt in eastern Iowa County. Although some parts of the county are not seeing growth, they may anticipate continued spillover that will have an impact on local development and infrastructure within the 20-year planning window.

Coordination with local governments and WisDOT can serve to address future mobility needs by looking at the potential impacts of planned development. If plans indicate that increased capacity will be needed, it can be incorporated into the transportation plan for that area. If this communication occurs during the planning process, coordination can help to ensure that more options are considered. One of the tools that can help to assess alternatives is to conduct a traffic impact analysis, looking at possible scenarios.

Ideally, WisDOT is included in the local planning process and effective planning helps the community to realize its local goals for development, efficiency, and safety, while minimizing environmental impacts. This can save both money and time, over the long- and short-term. When developments are planned and sited with adequate transportation facilities the community benefits and land is developed more efficiently in proximity to other development and to transportation infrastructure. WisDOT (and taxpayers) benefit because transportation investments continue to function throughout their projected life cycle and the public gets the best return on its tax investment.

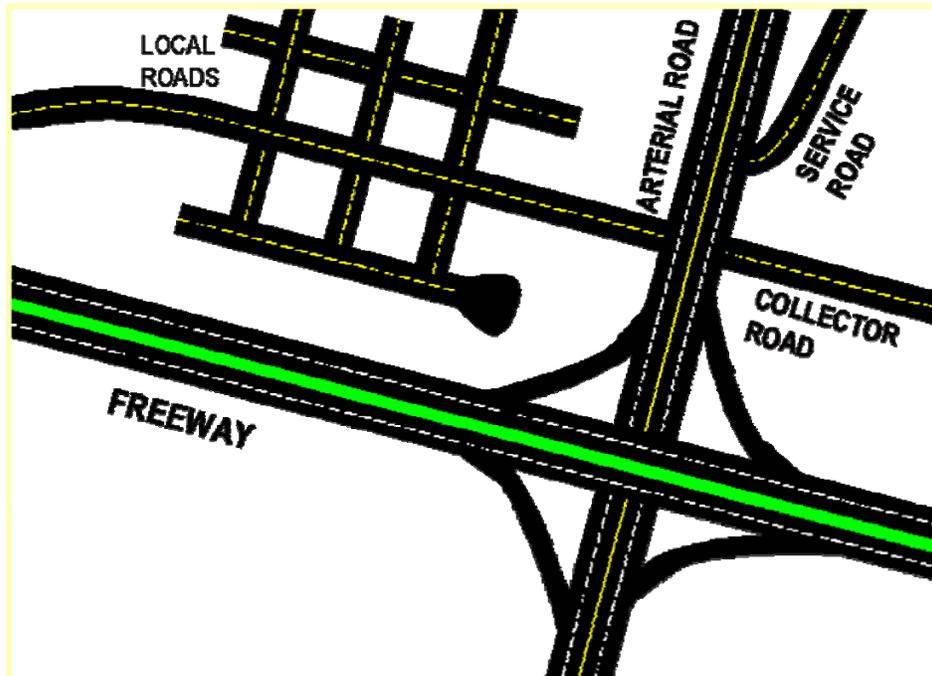

The community can plan for areas of new business and housing development that will be served by a system of local roads or streets. Rather than wait for a developer proposal, the comprehensive planning process is an opportunity for the community to lay out a logical system of collectors and local roads in undeveloped areas with the jurisdiction's boundaries. The community can potentially alter the plan to suit a particular development's needs and still uphold an overall plan that ensures efficient and safe connectivity. If there are questions during the planning process about the access management implications of a proposed development, coordination with WisDOT early in the process can help minimize future conflicts. See Appendix C-4 for more information.

The Village of Ridgeway's Plan Commission respondents foresee that growth pressures will impact the transportation system in the future. According to 2000 Census data, 15.5 percent of the Village's housing stock has been constructed between 1990 and March 2000. Development will likely require new residential streets and the Village should plan for future street connectivity.

Given its proximity to USH 18/151, the Village of Ridgeway should carefully coordinate housing and business development planning with WisDOT.

ENHANCING and IMPROVING CONNECTIVITY

Access management attempts to minimize conflicts by coordinating land development access, while preserving the flow of traffic on the surrounding road system in terms of safety, capacity, and speed. The main function of access management is to establish a balance between the existing traffic flow and highway access. It is achieved through managing the design and location of driveways, median openings, and points of access to the state highway system. The level of highway access control is based on the importance of the highway to regional and

statewide travel as determined through a functional classification system. Although controversial in some jurisdictions, the primary goal of access management is to ensure highway safety and to sustain the efficiency of the transportation system so costly retrofits don't have to be made.

EFFICIENCY & SAFETY

A 1980 report entitled *Access Control* explained the rationale for the state's access management regulations:

"The highly interdependent relationship that exists between land use and highways makes it necessary for the planning of each to be coordinated with the other. ... A property system must provide access to property and safe, efficient movement of traffic from one place to another. Both of these functions cannot easily be provided on the same street or highway. Vehicles entering or leaving the roadway slow traffic and cause congestion. Congested streets or highways handle less traffic than if traffic were moving freely. In addition, congestion imposes increased travel costs on users in the form of longer travel time and greater operating costs, higher accident rates, and loss of the public investment in the street or highway because its traffic carrying capacity is reduced. Access control can provide an effective and low cost means of abating the harmful effects of congestion. Five direct advantages are afforded by controlling access:

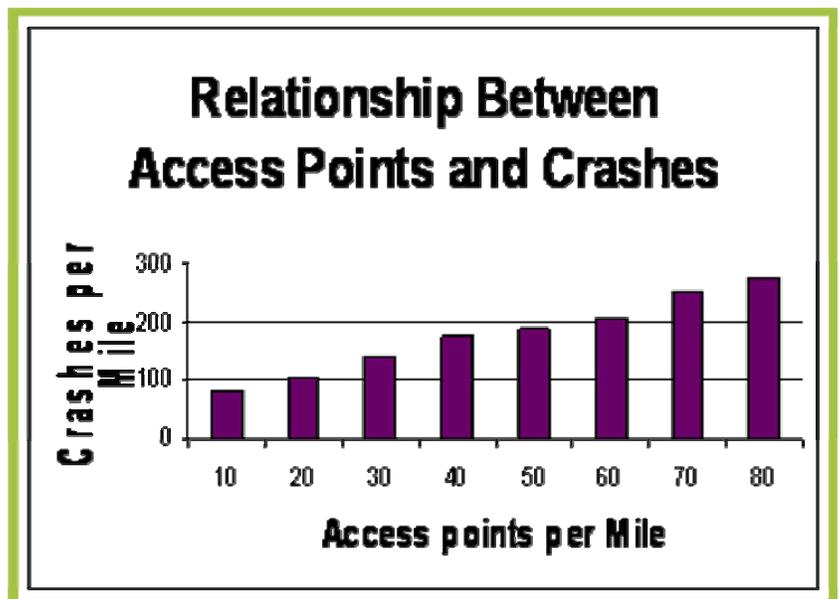

- *Preservation of the capacity and integrity of the roadway*
- *Reduction of travel times*
- *Improved safety and driving conditions*
- *Economy of operation*
- *And protection of the public investment in streets and highways.*

In contrast, relieving congestion by building new streets and highways [and bypasses] is becoming increasingly less desirable as it becomes more and more difficult to acquire the necessary rights-of-way and to find public funds to pay high construction costs. Continued new construction also consumes extensive amounts of land that may more profitably be put to other uses. ... Like it or not, none of us have an absolute unlimited right to use our land in any manner we please. We must take into consideration the impact that our use of land and land rights will have on others, both our immediate neighbors and the general public. Thus, if use of the right of access creates harmful interference with the public right to travel on a street or highway by increasing congestion and the likelihood of having an accident, the right of access may be regulated..."

Since 1980 when the quoted report was written, development pressures have only increased. Perhaps the reason that crash data has decreased is that jurisdictions have worked to ensure that the safety of corridor routes is preserved.

Nonetheless, access management has been a contentious issue and some people believe that the regulations impede development. Efforts to repeal Administrative Rule 233 came to fruition in 2004. Doubtlessly, there are examples where the implementation of the regulation had been less than ideal. However, congestion, caused by poor planning, and the resulting

loss of the efficiency of a roadway may make development less attractive. On a human scale, the most important issue and the greatest responsibility is to ensure safety. For more information, see Maps C.8 (Access Management), C.9 (Setbacks), and C.10 (Iowa County Traffic Counts) and Tables C-3a and C-3b (Motor Vehicle Crash data for the Village of Ridgeway) at the end of this Section and in Appendix C-5.

MAINTENANCE & IMPROVEMENTS

Each year WisDOT completes 350 to 400 state highway projects, costing an average of \$1.5 million each. In addition, WisDOT returns more than \$500 million to local governments to help finance the operation and improvement of locally-owned roads, streets and bridges. According to WisDOT, highways and bridges face increasing pressures as more traffic and larger trucks cause more wear and tear. At this time, more than 30 percent of the state’s highway pavement and 10 percent of bridges are deemed to require rebuilding or replacement. WisDOT projects that even with proper maintenance, the average pavement life is approximately 40 years and the average life of a bridge is about 70 years. Almost the entire highway system and a significant number of bridges will need to be replaced by 2020. See Tables C.4 and C.5 and Maps C.11a and C.11b at the end of this Section for more information.

At the time that this plan is being written, local communities receive one-third of state transportation funds. Transportation aids to local communities include funds for local road construction and maintenance, bridge improvements, capital assistance for airports, rail and harbor facilities, flood damage, expressway policing, and transit operating assistance. General Transportation Aids (GTA) are distributed to every town, village, city, and county in the state to help offset the cost of maintaining and improving the local road and street system. This is the largest category of local aid. In the 2003-05 state budget, GTA funding totals \$747 million.

A WisDOT pilot program is underway to encourage local government officials and WisDOT district staff to jointly evaluate potential local projects before they apply to WisDOT for funding. The purpose of this effort is to improve program stability by providing accurate cost estimates and realistic delivery timelines for local highway and bridge projects at the outset, saving both local governments and WisDOT time and money in delivering local transportation projects. According to the UW-Madison Transportation Information Center, by using the PASER system and Roadware software, municipalities can determine budget parameters, select possible projects, and evaluate the implications of maintenance decisions.

According to the UW-Madison Transportation Information Center, by using the PASER system and Roadware software, municipalities can determine budget parameters, select possible projects, and evaluate the implications of maintenance decisions.

The Village of Ridgeway uses the state’s PASER (**PA**vement **SUR**face **EVALUATION** & **RATING**) program but Plan Commission respondents commented: “We use it to rate roads, but don’t usually have the money to do the repairs.”

PROJECT COSTS

For many local governments, maintenance of the local road system is the single largest expenditure category. Privatization is often touted, but to-date, only a small handful of Wisconsin cities and villages (less than 1 percent) have privatized street repair and maintenance. A more common municipal practice in Wisconsin is contracting with county highway departments for certain types of repairs and maintenance, ranging from complete contracting to cooperative projects. Not surprisingly, development can add new demands for services and increase local costs without providing comparable increase in revenues. (Taken, in part, from UW-Extension *Fact Sheet #2: Comparison of Service Production Methods and the Incidence of Privatization.*) See Table C.6 at the end of this Section for more information.

Reconstruction

- Completely rebuilds road
- Flattens curves and hills
- Widens pavement and shoulders
- Improves safety and rideability
- May require some land acquisition

Reconditioning

- Involves reconditioning plus resurfacing
- Retains existing pavement core
- Improves roadside-shoulder widening and ditch restoration
- Improves isolated deficient curves, hill crests, intersections

Resurfacing

- Includes new pavement and gravel shoulders (includes base patching)
- May include intersections paving
- Places beam guards where needed
- Highway needing improvement:
- Maintains specific areas of potholes, extensive cracking, uneven pavement, low shoulders and rutting

—WisDOT

General Transportation Aids

In 2003, the Village of Ridgeway was budgeted to receive \$26,023.16 in General Transportation Aids and Connecting Highway Aids; the 2004 commitment was for \$28,104.88.

Local Road Improvement Program (LRIP)

The Village of Ridgeway has utilized the state's Local Roads Improvement Program (LRIP) fundings and, in 2002-2003, received \$11,423.89 for the reconstruction of Wells St., Hughett St., and Main St. (total project cost: \$22,847.79). See Tables C.7a and C.7b at the end of this Section and Appendix C-6 for more information.

Capital Improvement Program

Many municipalities use a Capital Improvement Program (CIP) to assist in planning for major project costs. A CIP is a multi-year scheduling of physical public improvements, based on the examination of available fiscal resources, as well as the prioritization of specific public improvements, to be constructed for a period of five to six years into the future. Capital improvements are those that include new or expanded physical facilities that are relatively large in size, expensive, and permanent. Street improvements, public libraries, water and sewer lines, and park and recreation facilities are common examples of capital improvements. See Appendix C-7 for more information.

The Village of Ridgeway does not currently utilize a Capital Improvement Program because, as Plan Commission respondents noted, there is "too little money."
